DealScope

Source-linked outside-in organizational diligence for PE/M&A

Pre-revenue hackathon MVP · 0 customers · $0 revenue · 0 signed pilots
All forecast figures are hypotheses—not actual traction.

Product and buyer hypothesis

One target company, 2–5 peers and a deal thesis become a human-reviewed memo of verified public findings and diligence questions, using company, people-history and hiring signals.

Target buyers: lower-middle-market PE, growth equity, family offices, independent sponsors and corporate development. Technical-diligence providers may be customers or partners.

The MVP is an early screen—not a full employee census, private technical diligence or valuation advice.

Commercial hypotheses

Per audit: **$750 / $1,500 / $3,000**. Annual deal-team plan: **$24,000** for 24 standard audits, plus $1,000 per overage audit. Hybrid: **$6,000/year workspace + $1,000/audit**. No unlimited plan.

Proposed route to market

Recruit paid design partners on live target decisions. Agree accuracy, coverage, time-saved and usefulness criteria; measure repeat usage and sales delays before annual-contract rollout. No signed demand is claimed.

Unit economics hypothesis

Delivery cost: **$94.65/audit** at the editable $0.10/credit midpoint: $2.60 Crustdata + $0.05 inference + $90 human QA + $2 tooling. Review assumes 1.5 hours at $60/hour.

Processing (3%) and support sit below gross profit. Founder salary is still a $0 placeholder; favorable model margins do not establish sustainable profitability.

Validate before scaling

Willingness to pay, deal-flow frequency, sales delay, API licensing/permitted use, credit price and consumption, measured inference, QA/support hours, security/compliance spend, renewal, refunds and collections.

Public-profile coverage is incomplete. Buyers expecting data-room or repository analysis may reject the current scope.

Actual resources and unknown cash

200 Crustdata hackathon credits; Gemini Flash; neatlogs; Entire. The allocation covers about 7 complete audits at 26 credits or 5 at the 40-credit cap. Credits are not cash or a recurring subsidy.

Available cash is unknown. Runway remains blank. No AWS credits or financing assumed.

12-month hypotheses · October 2026–September 2027 · USD

	Conservative	Base	Growth
Earned revenue	$30,000	$270,000	$390,000
Audits delivered	40	180	390
Gross margin	87.20%	93.69%	90.54%
Contribution margin	82.20%	90.02%	86.79%
Peak modeled funding need	$1,500	$0	$0

Conservative: 2 customers × 2 audits/month, $750 pricing, data/model costs +50%, first revenue delayed two months. Base: 5 customers × 3 audits/month at $1,500 from month one. Growth: linear ramp to 15 expected customer-equivalents × 4 audits/month on annual pricing.

Growth cash collections of $555,000 include $165,000 of year-end deferred service obligations—not extra earned revenue. Collection timing and zero founder draw require validation; zero modeled funding need does not mean cash is available.

Source: dealscope-assumptions.md, prepared 11 October 2026. Snapshot of the initial editable model. Ari additions: $0.10/credit midpoint, 0.5 support hours/customer/month at $60/hour, upfront annual/workspace collection and same-month usage collection; no churn or renewal in this initial horizon. Taxes and opening working capital excluded pending facts.
